

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

specimen is an immature. Its measurements are: total length 26 millimeters, "tail" one millimeter, hind limb 39, hind foot 18, overlap of heels behind anus 4, head width 9, length of parotoid 7, width of parotoid 2.7. The specimen agrees in all but minor points with descriptions of *truei*. There is a gular fold across the chest. The color in alcohol is uniform, dark, slaty grey above, without any traces of darker markings, and including the top of the head anterior to the eyes. The snout has a lighter Y-shaped median, vertical band between the two darker spots about the nostrils. Below the eye is another dark area separated from the nasal patch by a lighter spot. The underparts are dusky yellow and a continuation of this color is seen in a light band across the shoulder. The numerous small tubercles on the back are each tipped with white.

### STUDYING THE BOX TURTLE.

While collecting insects in woods at Orient, Oct. 8, 1916, I met an unusual, large, handsome male box turtle *Cistudo carolina*. The plastron measured six and a half by five inches. The head and neck exceptionally bright orange.
